

Proxy Firewall Telegram Alert Setup—Full Guide

This guide will walk you through how to:

- Create your own Telegram bot
- Get your bot token and your chat ID
- Access the web dashboard
- Configure your bot token and chat ID via /settings
- Receive real-time notifications from the firewall

Step 1: Create a Telegram Bot (Get the Token)

1. Open Telegram
2. Search for @BotFather and click Start
3. Send the command: /newbot
4. Give it a name and a username (must end in 'bot')
5. BotFather will give you a bot token like:
123456789:ABCdEfGhIjKlMnOpQRsTUVwxYZ -> **Copy this token.**

Step 2: Get Your Telegram Chat ID

1. Search for @userinfobot in Telegram and click Start
2. It will reply with your Chat ID, like: ID: 861835718 -> **Copy this number.**

Step 3: Access the Dashboard

1. Start your project: python3 proxy-firewall.py
2. Open your browser to: http://localhost:5000
3. Log in or register if prompted

Step 4: Add Your Token and Chat ID in Settings

1. Go to: http://localhost:5000/settings
2. Paste your Bot Token and Chat ID into the form
3. Click 'Save Settings'. Your Telegram bot is now connected.

Step 5: Start Using the Bot

- Alerts for site blocks, filtered words, login attempts, etc., will be sent to Telegram.

Summary:

- Create bot: @BotFather
- Get chat ID: @userinfobot
- Dashboard: <http://localhost:5000>
- Settings: <http://localhost:5000/settings>
- Alerts: Sent through your Telegram bot
